About

I am currently a professor at the Federal University of Santa Catarina (UFSC), Araranguá, Brazil. I

Research Interests

My main research interests are:

- artificial intelligence hardware (mixed-signal hardware accelerators).

- CAD tools for analog integrated circuits;
- optimization and metaheuristics;
- analog integrated circuit design;
- artificial intelligence techniques;
- analog computing;

Goals/Vision

Our plans for the future are as important as where we are right now. To provide a better insight about my professional goals, I've decided to share my short and long-term objectives.

5-year goal (from 2019 to 2023): become a national leading researcher in **artificial intelligence hardware (mixed-signal hardware accelerators for AI applications)**;

10-year goal (from 2019 to 2029): become an international leading researcher in **artificial intelligence hardware**; create/be part of a **strong research group in the area**;

Professional life goal: become an agent of change in the national and international scenario, **promoting technological and social improvements**.

Education

Doctorate in Microelectronics - June 2015

University of São Paulo - São Paulo, Brazil

- Dissertation Title (translated from Portuguese): Synthesis of analog integrated circuits in system-level and circuit-level using modern optimization methods

- Research Synopsis: analog integrated circuits are very important in modern electronic systems, performing tasks such as analog to digital conversion, digital to analog conversion, radio frequency communication, filtering and others. The design of this type of circuit requires attending to several performance specifications, being usually performed only by experienced designers. We developed techniques for the design of circuit-level and system-level analog circuits. As the optimization core, we proposed an algorithm based on Simulated Annealing while considering multiobjective information through the use of a crossover operator. An hybrid algorithm combining the proposed algorithm with Particle Swarm Optimization was created to properly explore the Pareto front. Tests indicated the algorithms are efficient for the design of analog circuits as well as outperform many other derivative-free algorithms when applied to purely mathematical problems.

B.S. in Electrical Engineering - Jan. 2010

Federal University of Santa Maria - Santa Maria, Brazil

- Undergraduate Thesis Title (translated from Portuguese): Tool for integrated circuit synthesis with an educational approach
- Modules included:
 - Analog Integrated Circuits Design
 - Special Topics in Microelectronics
 - Programmable Logic Systems
 - Conception of Integrated Circuits
 - Data Communication
 - Signal Processing

Research

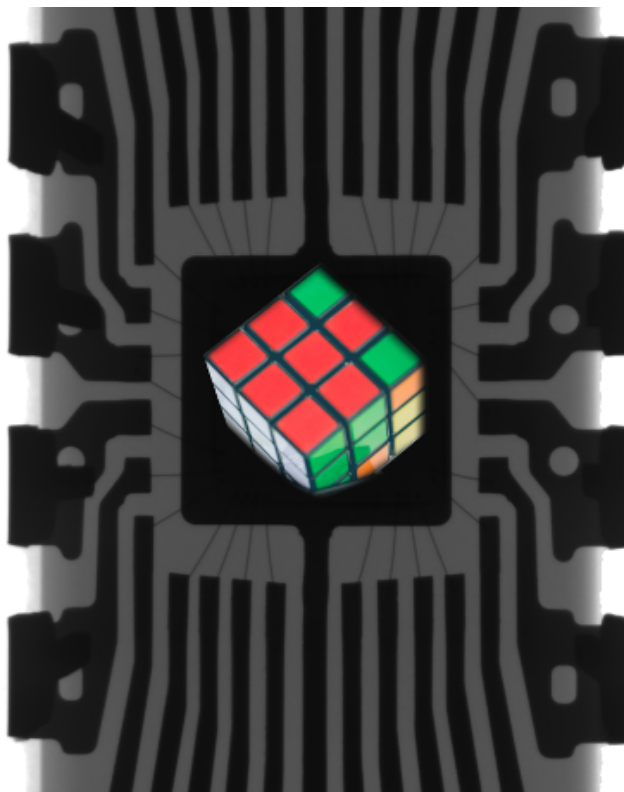

Here you will find:

- My Research Projects and Goals
- Previous Publications
- 2019 Conference Deadlines

Research Projects and Goals

By sharing my research projects and goals, my intention is to communicate my professional road map to current and potential collaborators (other researchers, students and companies).

Research Line: Artificial Intelligence - Hardware Accelerators

This research line aims the development of integrated circuits to provide hardware acceleration for Artificial Intelligence applications. The objective is to develop new topologies and systems that improves the state-of-the-art on hardware-based machine learning.

- 2019 Research line publication goals:
 - **TODO** Journal paper related to Analog Artificial Neuron Networks
 - **TODO** Conference paper related to Digital Artificial Neuron Networks

Research Line: Microelectronics / Analog Design Synthesis

This research line aims the development of techniques for analog design synthesis in circuit and system level. The objective is to advance the state-of-the art in analog circuit synthesis/optimization by bridging system-level optimization with circuit-level optimization.

- 2019 Research line publication goals:
 - **STARTED** Journal paper related to the SAMPA Chip (32 Channels ASIC for the ALICE TPC and MCH Upgrades)
 - **TODO** Journal paper related to New optimization algorithms for Integrated Circuit Design
 - **TODO** Journal paper related to Open Integrated Circuit Testbenches
 - **TODO** Journal paper related to Optimization Strategy for IC System Design

Research Line: Artificial Intelligence - Software

This research line aims the development of new Artificial Intelligence techniques and applications.

- 2019 Research line publication goals:
 - **STARTED** Journal paper related to Corporal Postures
 - **TODO** Journal paper related to Brazilian Stock Market Prediction using Deep Neural Networks
 - **TODO** Journal paper related to River Salinity Prediction Model

2019 Conference Deadlines

January	February	March	April	May	June
	10th: NEWCAS	18th: SBCCI 31st: INSCIT	SBMICRO 24th: Special issue on Bio-inspired ...	VLSI-SoC FEEC	IC
					3rd 9th

- NEWCAS (IEEE International New Circuits and Systems Conference)

Top-ranked papers will be on IEEE Transactions on Circuits and Systems-I.

- SBCCI (Symposium on Integrated Circuits and Systems Design)

Top-ranked papers will be on JICS. Co-located with WCAS, Sforum, FEEC and INSCIT

- INSCIT (Symposium on Instrumentation Systems, Circuits and Transducers)
- WCAS
- SForum
- VLSI-SoC

Will be held in Peru. Top-ranked papers will be on a Springer Book

- ICCD

Will be held in NYU Abu Dhabi.

- Special issue on Bio-inspired algorithms and Bio-systems - Journal of Mathematical Biosciences and Engineering

Teaching

Federal University of Santa Catarina (UFSC): my lectures are for the Computer Engineering course

Classes

- Second semester of 2018:
 - Electric Circuits for Computer Engineering (in Portuguese: "Circuitos Elétricos para Computação")
 - Data Communication (in Portuguese: "Comunicação de Dados")
 - Signal Acquisition Systems (in Portuguese: "Sistemas de Aquisição de Sinais")
- First semester of 2018:
 - Data Communication (in Portuguese: "Comunicação de Dados")

- Signal Acquisition Systems (in Portuguese: "Sistemas de Aquisição de Sinais")
- Second semester of 2017:
 - Special Topics in Analog Microelectronics (in Portuguese: "Tópicos Especiais em Microeletrônica Analógica")
 - Data Communication (in Portuguese: "Comunicação de Dados")
 - Signal Acquisition Systems (in Portuguese: "Sistemas de Aquisição de Sinais")
- First semester of 2017:
 - Special Topics in Analog Microelectronics (in Portuguese: "Tópicos Especiais em Microeletrônica Analógica")
 - Electric Circuits for Computer Engineering (in Portuguese: "Circuitos Elétricos para Computação")
 - Signal Acquisition Systems (in Portuguese: "Sistemas de Aquisição de Sinais")
- Second semester of 2016:
 - Electric Circuits for Computer Engineering (in Portuguese: "Circuitos Elétricos para Computação")
 - Data Communication (in Portuguese: "Comunicação de Dados")
 - Signal Acquisition Systems (in Portuguese: "Sistemas de Aquisição de Sinais")
- First semester of 2016:
 - Electric Circuits for Computer Engineering (in Portuguese: "Circuitos Elétricos para Computação")
 - Fundamentals of Mathematics to Computer Science (in Portuguese: "Fundamentos Matemáticos para Computação")

Short Course

- Course in GNU Octave / Matlab and Applications for Engineers (in Portuguese: "Curso de GNU Octave / Matlab e Aplicações para Engenheiros"). This material was presented at the II Computer Engineering Academic Week in March 2018 at UFSC - Campus Araranguá - Presentation in Portuguese

Integrate your Circuit Design Flow and Reports: Demonstration of Ngspice and Octave/Matlab Interaction within Emacs

by Tiago Oliveira Weber <2016-08-04 Qui>

Can you imagine being able to explore new design ideas, perform calculations, run circuit simulations, calculate some more based on the results and generate reports, all in the same place? Well, you can stop imagining and start developing your next electric/electronic project on Emacs.

Recently, I've made a blog post introducing ob-spice, which is a simple language extension to ob-babel to be able to simulate Ngspice within Emacs. In the present post I will show how we can use ob-spice to perform interaction between Ngspice, Octave (or Matlab) and any other language of our interest. While the experienced org-mode user would already assume this interaction possible from ob-babel features, it is the first demonstration of ob-spice receiving vector inputs (a new feature to ob-spice) and producing outputs back to other languages.

In our example we will design a simple opamp inverting topology. For that purpose, we will calculate the resistor values in Octave/Matlab, *pass the values to* `[[file:../blog/entry4.org][... Read more]]`

Design Automation Conference (DAC) Video About Moving EDA Tools to Open Source

by Tiago Oliveira Weber <2016-07-06 Qua>

The 53rd Design Automation Conference had a great discussion about opportunities for open source tools on the Electronic Design Automation world and market models for existing companies. Luckily for all of us, the panel video is available online on YouTube's DAC TV channel with the title "Lanzas Tech Vision Challenge: Daring to Move to Open Source". The moderator was Lucio Lanza (from Lanza TechVentures) and the panelists were Warran Savage (from IP Extreme), Mark Templeton (from Scientific Ventures) and Michael Wishart (from eFabless).

In my opinion all participants were very rational on their statements although having different points of view. I, as an open source advocate, felt very glad this type of discussion is taking place in such a relevant conference

and with people that know from the inside out how the current EDA business works. ... Read more

Software/Hardware Integration Lab

by Tiago Oliveira Weber <2016-06-27 Seg>

I am now a member of the **Software/Hardware Integration Lab** (LISHA) at the Federal University of Santa Catarina. According to the official site:

The Software/Hardware Integration Lab (LISHA) was founded in 1985 to promote research in the frontiers between hardware and software. Since then, it has dedicated considerable efforts to research in areas such as computer architecture, operating systems, computer networks and the related applications. Currently, the laboratory focuses on innovative techniques and tools to support the development of embedded systems.

My webpage at LISHA is <https://lisha.ufsc.br/Weber> and the announcement (in portuguese) of the start of LISHA at UFSC Araranguá is here. ... Read more

Simulating Circuits with Emacs, Org-mode, Babel and Ngspice

by Tiago Oliveira Weber <2016-06-26 Dom>

Picture this. You are creating a report, studying or preparing a class. While you write your text, you suddenly feel that it is time to show in a circuit how your project works. Now the adventure begins: to add the results of a given simulation to your document, you will have to open your simulation software in another window, describe the circuit using a schematic editor, simulate it and then copy and paste the results to your text file. You might as well copy the image of some waveforms. Additionally, you will also have to describe the circuit elements in such a way that the reader of your report knows what you have simulated.

In this process a lot can be lost: the quality of your schematic screenshots may or may not be a delight to the eyes, but even if the quality is great, there is still a lot of information that is not accessible through an image of the schematic. These can be the various component properties, simulation parameters and component models. In top of that, if you are like me, you will probably spend a lot of time editing and working with the waveforms to make them fit ... Read more

Microelectronics

Map of Microelectronics in Brazil

This map is an attempt to help the visualization of microelectronics in Brazil. Special thanks to Andre Couto and Luciana Shiroma for supplying initial information about the private companies.
